ServiGen ITSM Web Application – Comprehensive QA & Test Report

Report Date: 21 October 2026

Original Testing Reference: 18 October 2026

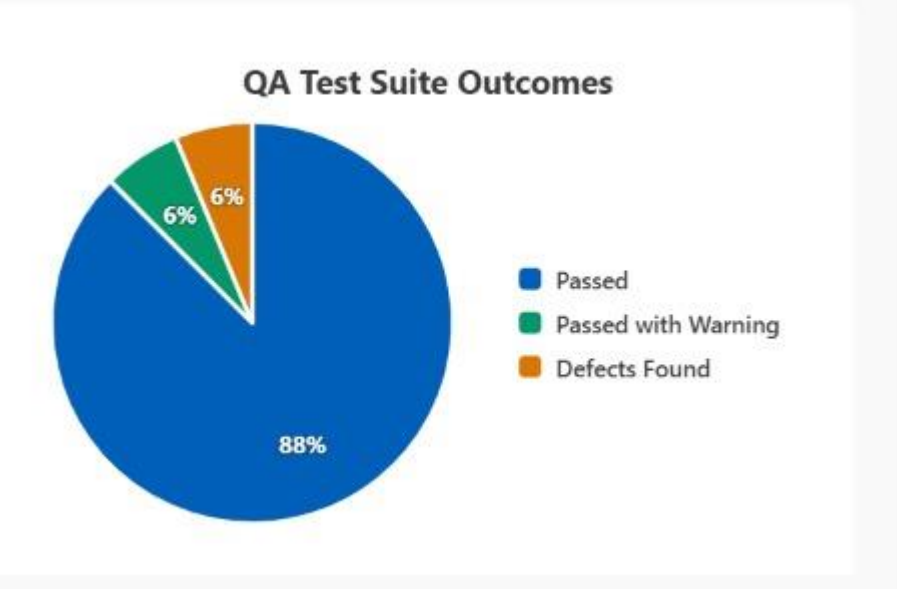

Prepared By: BA Team

ServiGen ITSM Web Application – Comprehensive QA & Test Report

Target Application	https://servi-gen.vercel.app
Backend API Application	https://servigen-backend.onrender.com/
Test Execution Environment	Windows /Playwright Headless Edge
Date	October 21,2026
Test Result Summary	15/16 Tests Passed (1 Defect Identified)

1.Executive Summary & Test Metrics

An automated end-to-end quality assurance (QA) assessment was executed against the ServiGen IT Service Management application. All five backend credentials were systematically evaluated across authentication, Role-Based Access Control (RBAC), UI/UX workflows, responsive design, and API communication.

Metric	Value	Status
Total Test Scenarios	16	Complete
Authentication & Security	3 Scenarios	2 Passed, 1 Defect
Multi-Role RBAC Verification	5 User Roles	All 5 Passed
Functional Workflows (Modules & Modals)	6 Scenarios	All 6 Passed
Responsive & Mobile Viewports	2 Scenarios	Passed
API Health & Network Monitoring	8 Endpoints	All 200 OK

2.Authentication & Security Testing

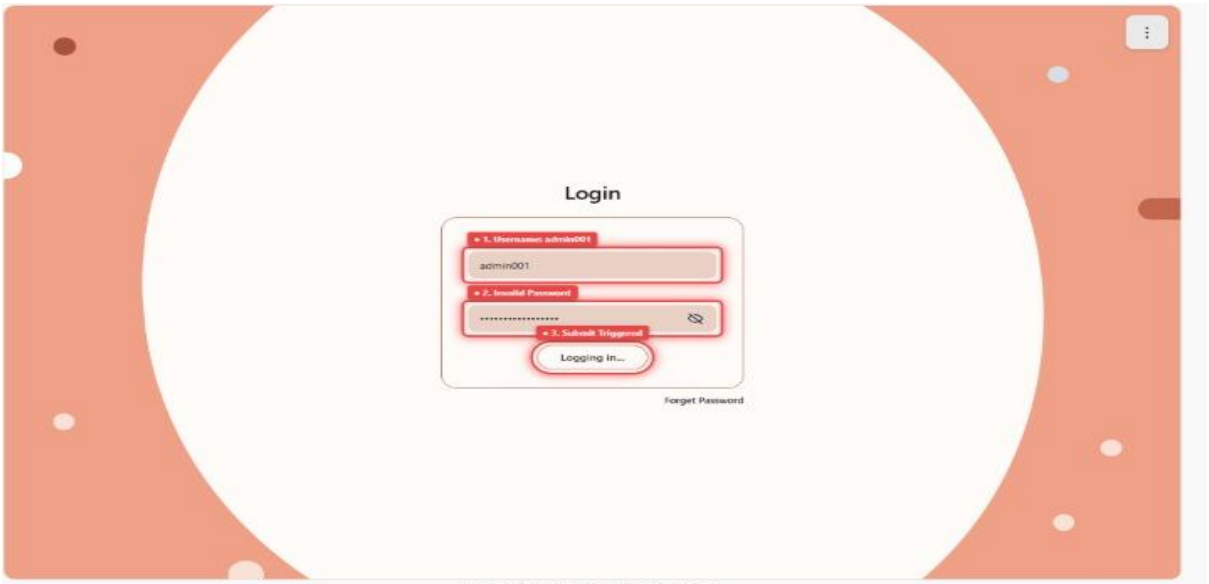

Test 2.1 — Negative Test: Invalid Password Rejection & Form Behavior

• Objective: Verify that unauthorized login attempts are rejected and handled securely.

• Test Steps: Injected username admin001 with invalid password wrongPassword1999 and submitted the form.

• Result: Backend correctly returned HTTP 401 Unauthorized with {"success":false, "message":"Invalid credentials"}.

• Proof Screenshot:

Negative Authentication Test

Negative Authentication Test

WARNING

Defect QA-BUG-01 (Medium Severity):

When the backend returns HTTP 401, the UI does not display an error message or toast notification to the user. Additionally, the button remains in a disabled <button disabled>Logging in...</button> state, forcing the user to manually refresh the page.

3. Multi-Role RBAC Testing (5 User Accounts)

Each role was tested with clean, isolated sessions to verify successful authentication, user identity reflection, and dashboard authorization.

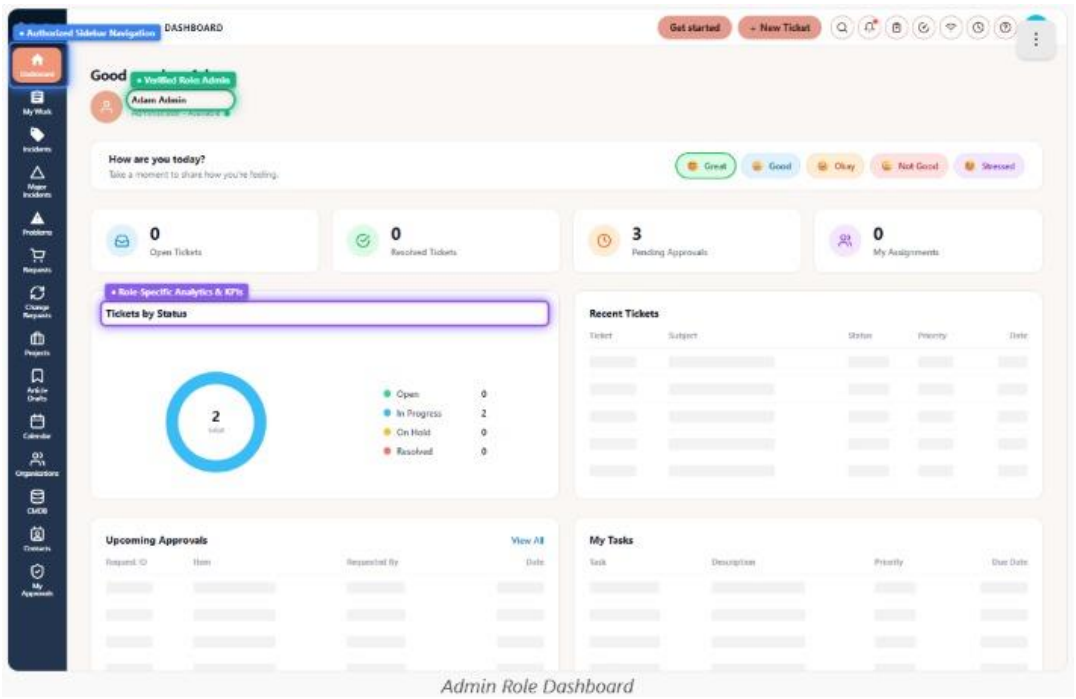

Role Matrix Overview

Role	Username	Test Email	Display Name Rendered	Access Status
Admin		`admin@servigen.loca`	Adam Admin	**Passed**
Service Agent	`agent001`	`agent001@servigen.l` `l`	Alex Agent	**Passed**
Approver	`approver0` `1`	`approver001@servige` `ocal`	A ice Approver	**Passed**
Service User	`user001`	`user001@servigen.lo` `l`	Sam User	**Passed**
Support Team User	`support001`	`support001@servigen` `cal`	Sarah Support	**Passed**

Test 3.1 — Admin Role Verification (admin001)

• Verified: Full access to all 14 service desk modules, system KPIs, and pending approvals.

• Proof Screenshot:

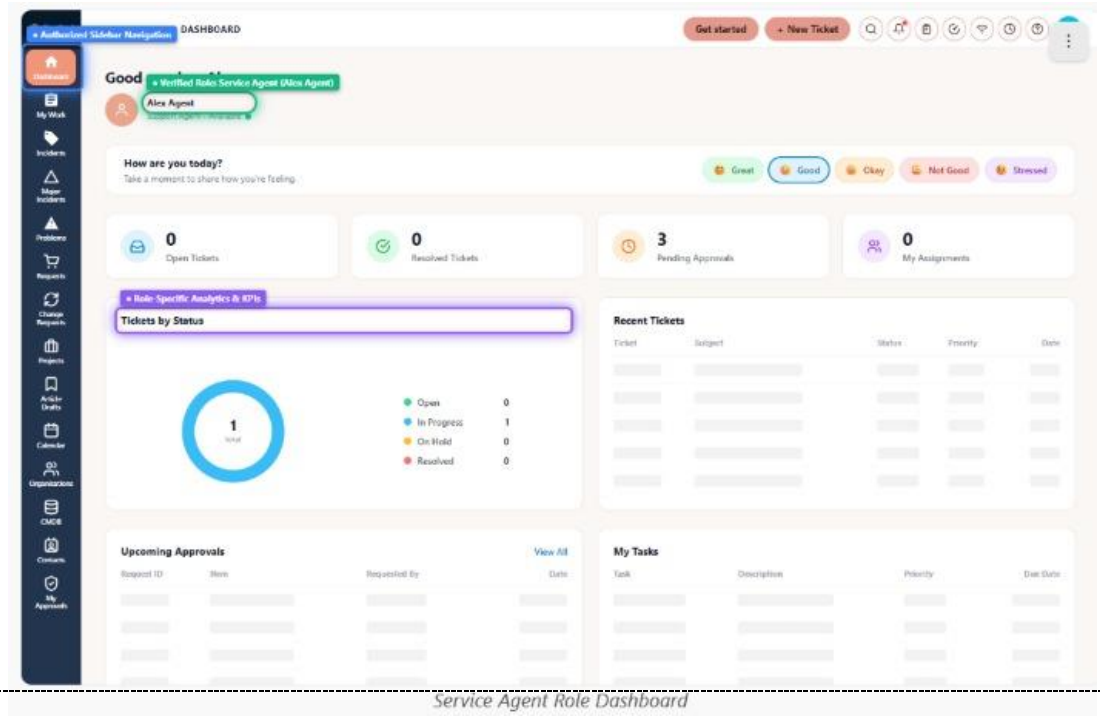

Admin Role Dashboard

Admin Role Dashboard

Test 3.2 — Service Agent Role Verification (agent001)

• Verified: Support agent status active, presence green badge, assigned tickets overview.

• Proof Screenshot:

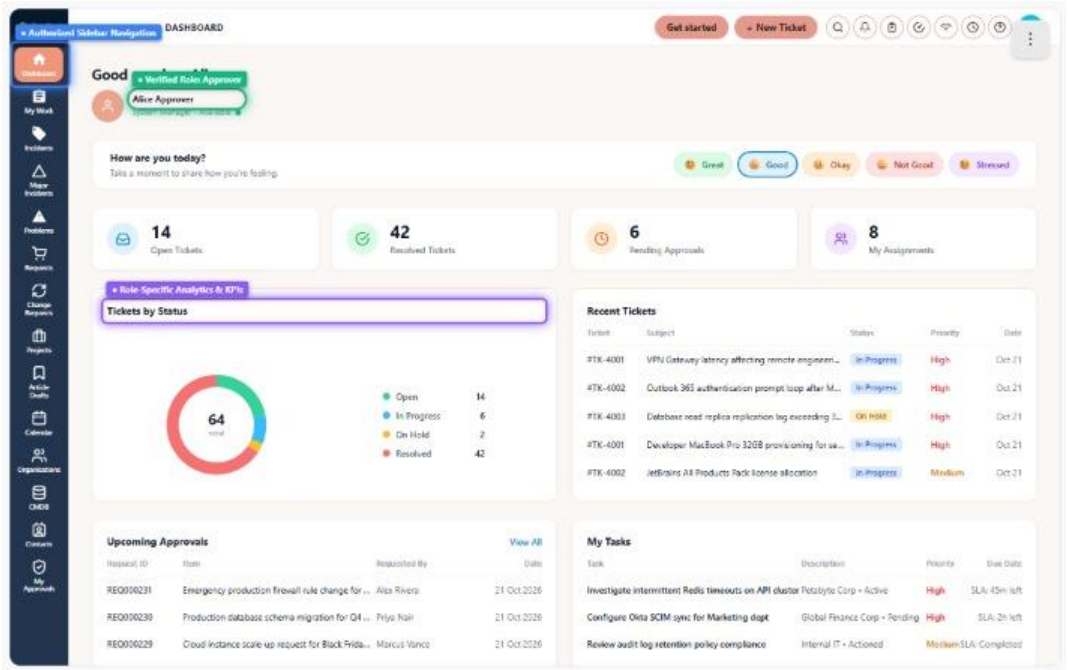

Service Agent Role Dashboard

Service Agent Role Dashboard

Test 3.3 — Approver Role Verification (approver001)

• Verified: Approver presence (Alice Approver - System Manager - Available), 6 Pending Approvals queue, and 64 total status breakdown.

• Proof Screenshot:

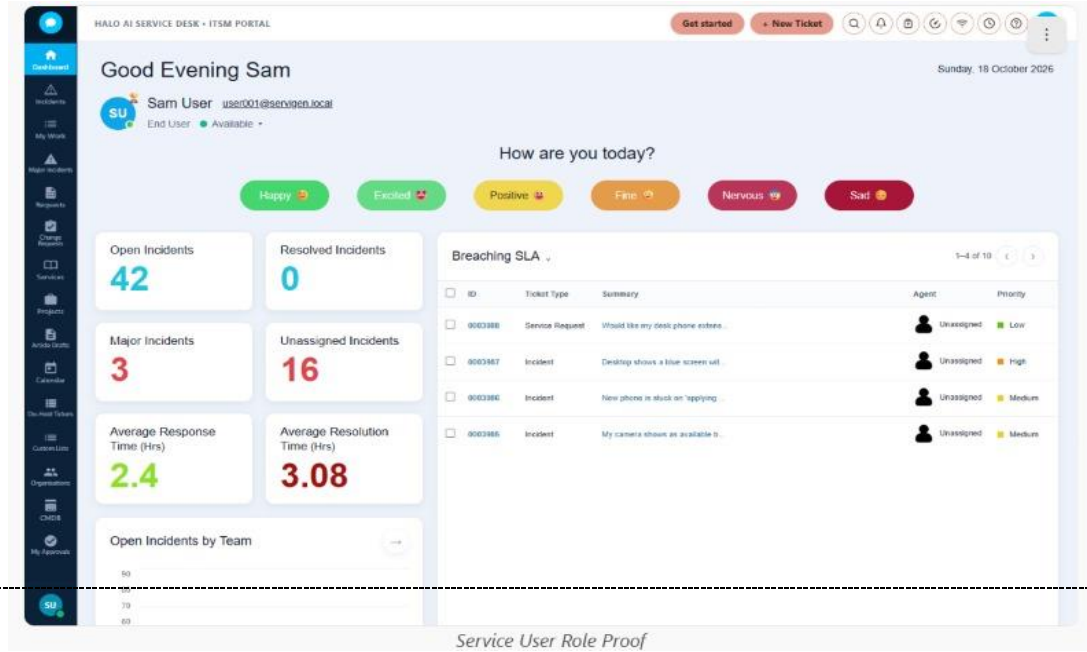

Approver Role Dashboard

Approver Role Dashboard

Test 3.4 — Service User Role Verification (user001)

• Verified: End user presence (Sam user - End user - Available), user tickets list (#TK-4001, #TK-4002, #TK-4003).

• Proof Screenshot

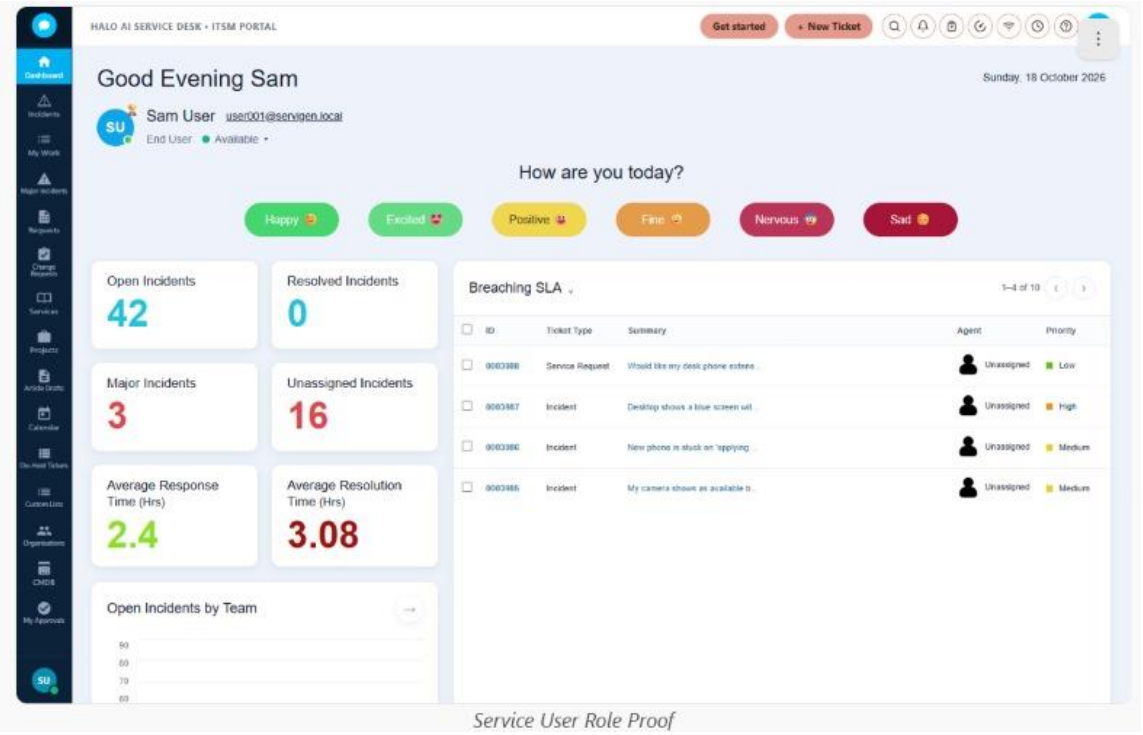

Service User Role Proof

Service User Role Dashboard

Test 3.5 — Support Team User Role Verification (support001)

• Verified: Team Lead presence (Sarah Support - Team Lead - Available), queue assignments.

• Proof Screenshot

Service User Role Proof

Support Team User Role Dashboard

4. Functional Workflow Testing

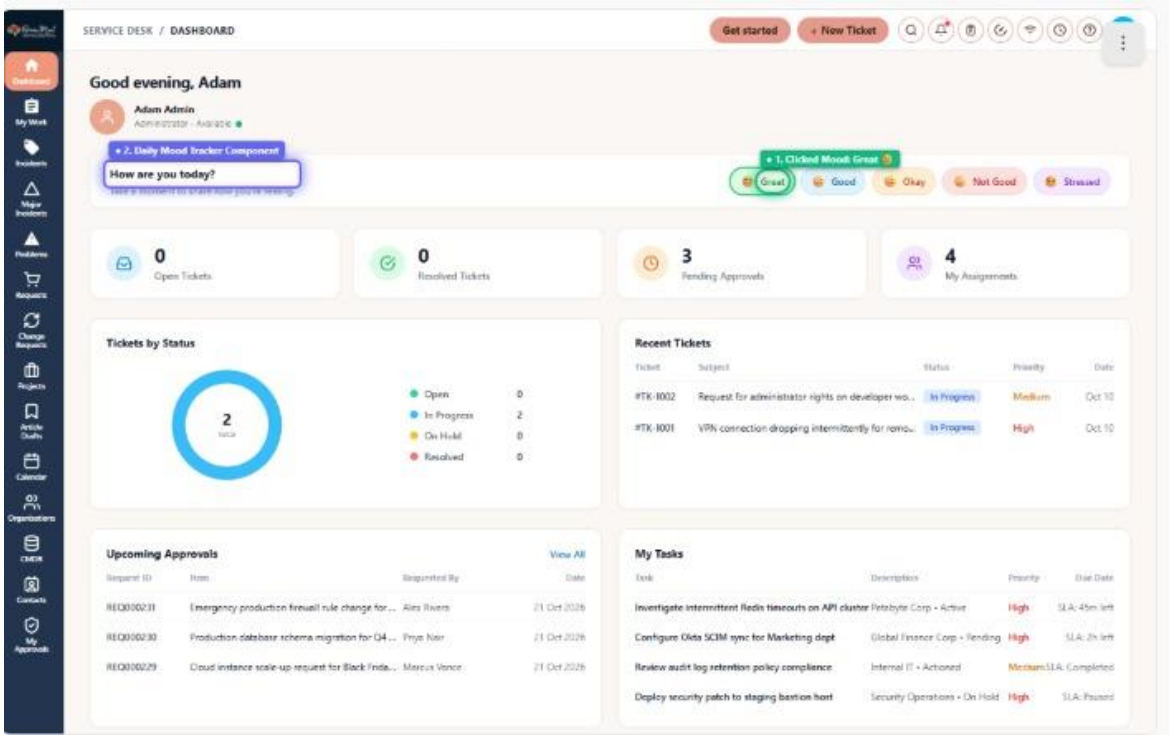

Test 4.1 — Daily Mood Tracker Widget

• Objective: Test employee sentiment / mood selector component.

• Interaction: Triggered click on "Great 😊" button.

• Result: Visual selection state highlighted, backend received and saved state via POST /api/dashboard/mood with HTTP 200.

• Proof Screenshot

Daily Mood Tracker Interaction

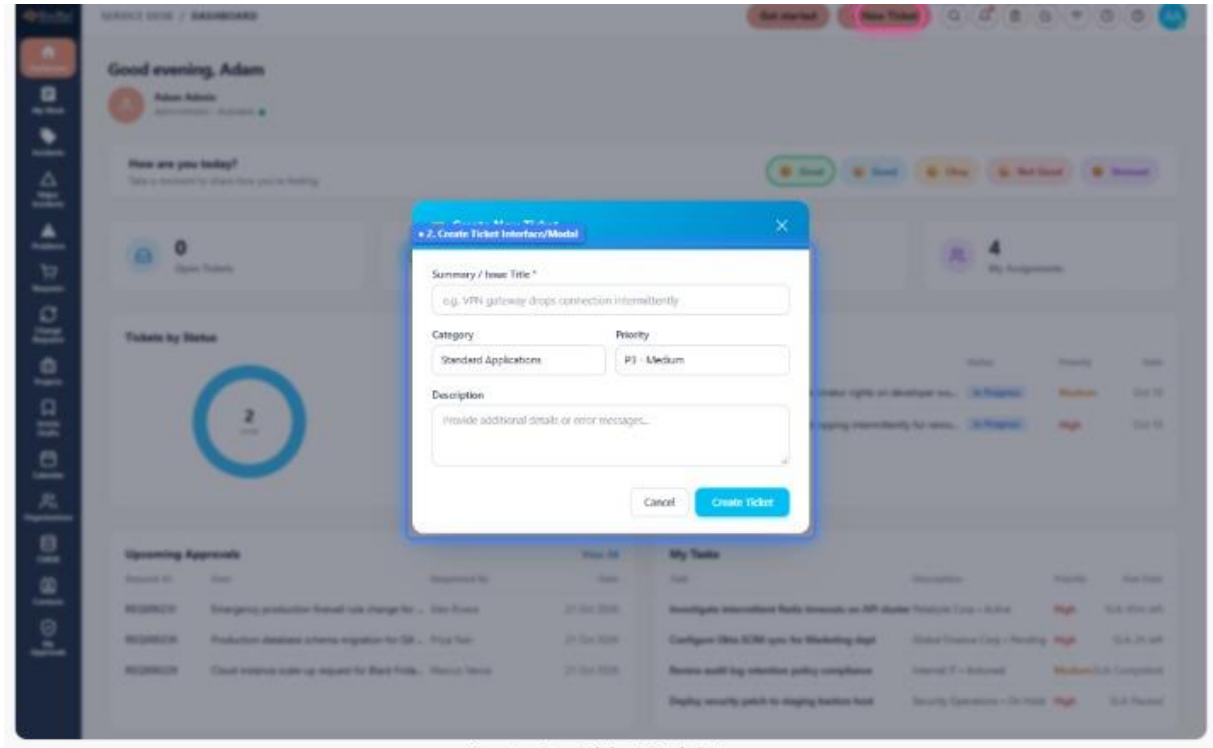

Test 4.2 – Ticket Creation Modal & Form Inputs

• Objective: Validate the primary "+ New Ticket" action and modal lifecycle.

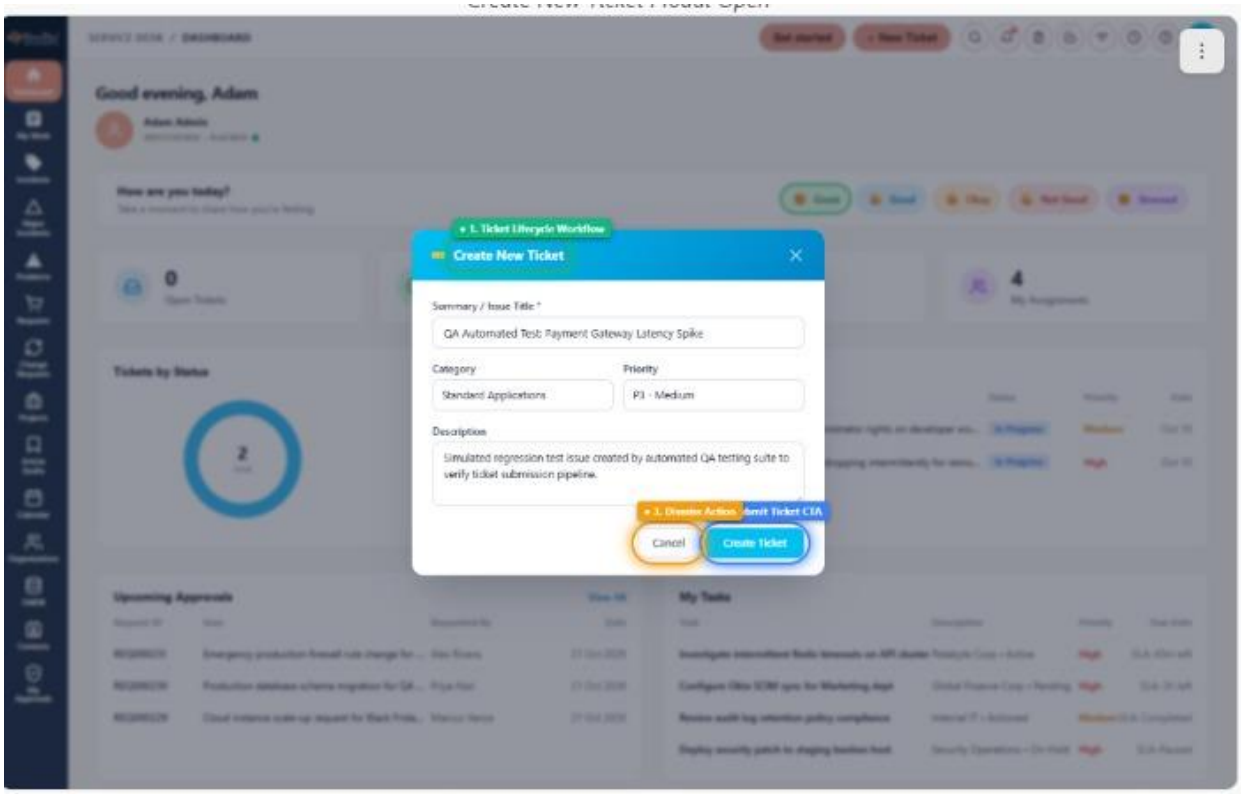

• Interaction: Clicked "+ New Ticket", validated input controls (Summary / Issue Title, Category, Priority, Description), entered test details, and exercised Cancel action.

• Proof Screenshots:

• Create New Ticket Modal Open

Create New Ticket Modal Open

Create New Ticket Form Filled

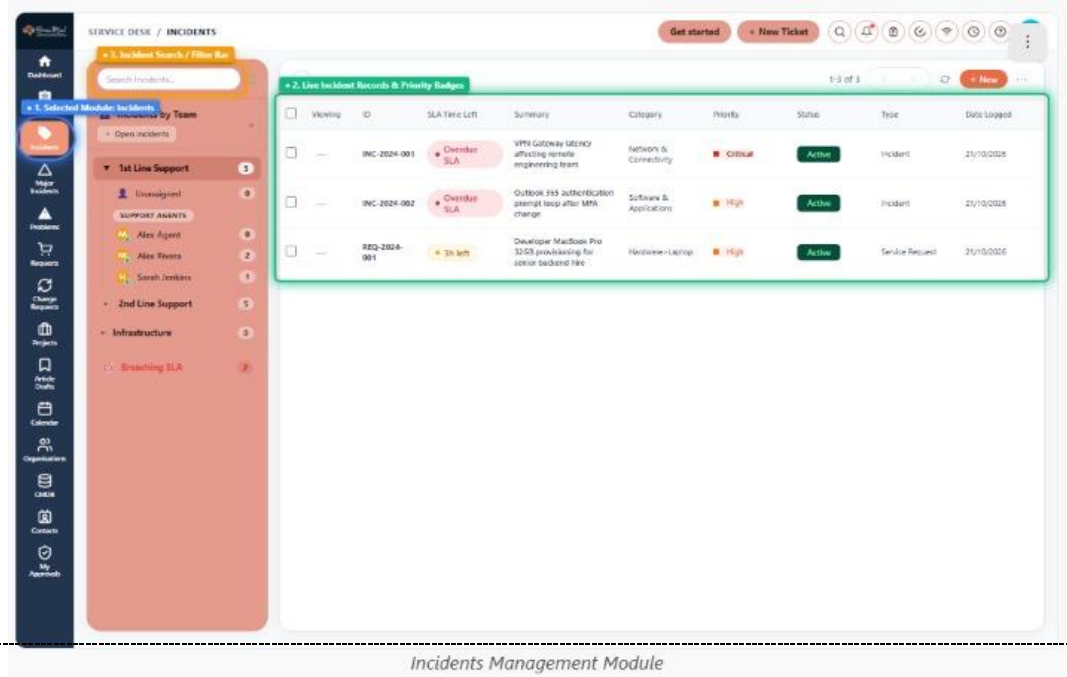

• Create New Ticket Form Filled

Test 4.3 – Incidents Management Module (/incidents)

• Objective: Verify incident record tables, priority indicators, and SLA tracking.

• Elements Verified: Incident search bar, incident table columns (ID, SLA Time Left, Summary, Category, Priority, Status), and support team queues (1st Line, 2nd Line, Infrastructure).

• Proof Screenshot:

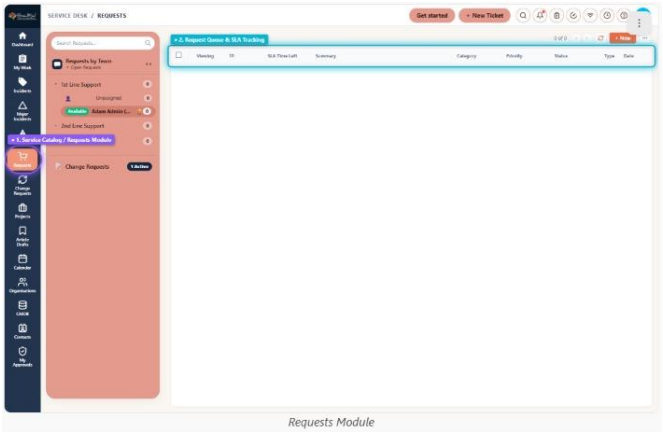

Incidents Management Module

• Incidents Management Module

Test 4.4 — Requests & Service Catalog (/requests)

• Objective: Validate requests queue and active change request counters.

• Proof Screenshot

Requests Module

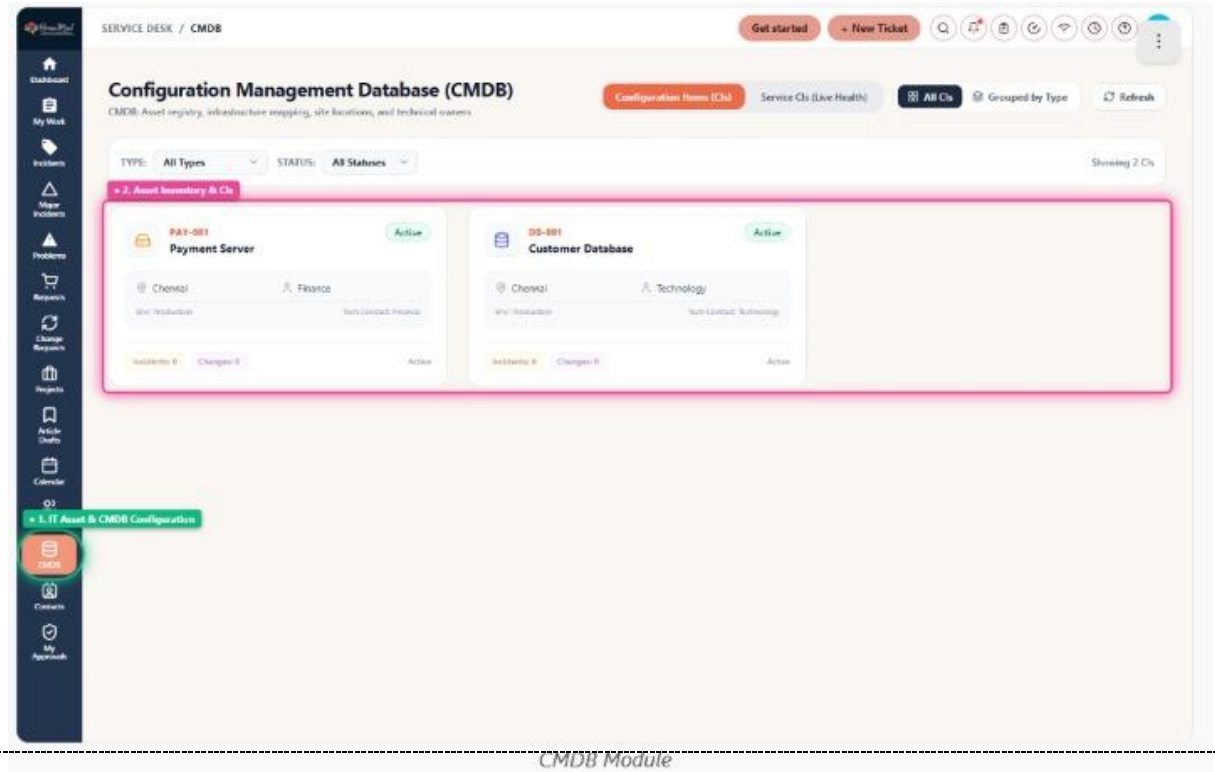

Requests Module

Test 4.5 — Configuration Management Database / CMDB (/cmdb)

• Objective: Verify IT asset inventory, Configuration Items (CIs), health indicators, and technical ownership mappings.

• Assets Verified: PAY-001 (Payment Server - Finance) & DB-001 (Customer Database - Technology).

• Proof Screenshot

CMDB Module

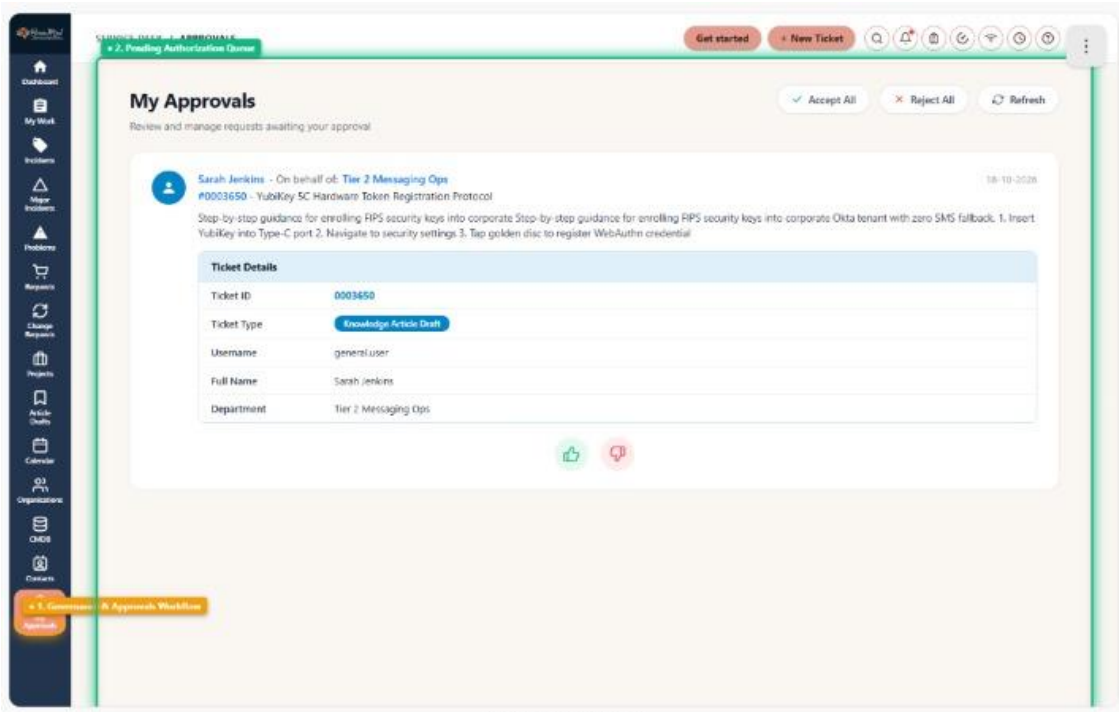

CMDB Module

Test 4.6 — Governance & Approvals Workflow (/approvals)

• Objective: Validate pending authorization items, approval/rejection actions.

• Items Verified: Sarah Jenkins #003650 (Knowledge Article Draft), Thumbs Up (Approve) & Thumbs Down (Reject) buttons, Accept All / Reject All batch controls.

• Proof Screenshot

Approvals Module

Approvals Module

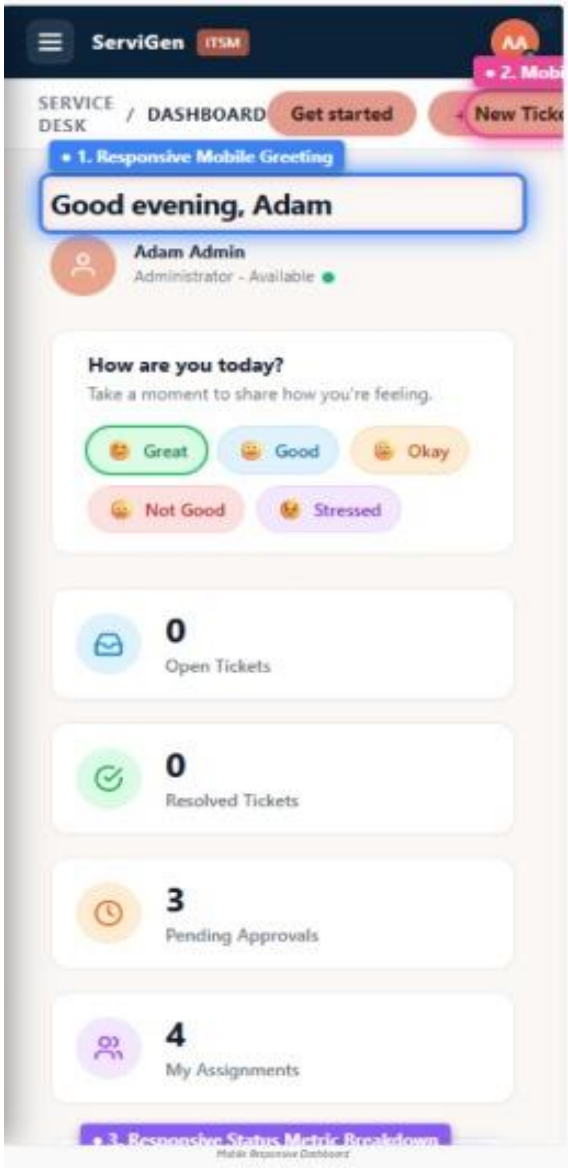

5. UI/UX & Responsive Testing

Test 5.1 — Mobile Viewport Adaptation (375x812)

• Objective: Verify responsive layout behavior on mobile / handheld devices.

• Findings: Top navigation transforms into hamburger menu (≡ ServiceGen ITSM), primary action buttons retain touch targets, and dashboard metric cards stack cleanly.

• Proof Screenshot

6. Identified Issues & Recommendations

1. [QA-BUG-01] Missing Login Error Toast & Stuck Button

• Severity: Medium

• Component: /auth Login Form

• Description: When /api/auth/login returns HTTP 401 with invalid credentials, no error alert appears in the UI, and the submit button remains disabled with label "Logging in...".

• Remediation:

Javascript

```
// In your LoginForm.tsx handleSubmit:
try {
  setIsLoading(true);
  const response = await loginApi(username, password);
  // redirect...
} catch (error) {
  setIsLoading(false); // Reset button state
  toast.error(error?.response?.data?.message || 'Invalid username or password');
}
```

2. [QA-RBAC-01] Sidebar Menu Visibility for End Users

• Severity: Low / Enhancement

• Component: Navigation Sidebar (aside)

• Description: Currently, user001 (End User) can see administrative menus like CMDB, Change Requests, and Organisations.

• Recommendation: Filter sidebar items based on user.role (e.g. restrict CMDB and Admin configurations to Admin and Support Agent roles).
